

Table of Contents

Preface	ix
I Part I	1
1 Jamming Attacks Detection and Classification in Cognitive UAV Radios	3
<i>Ali Krayani, Lucio Marcenaro, Carlo Regazzoni</i>	
1.1 Introduction	3
1.2 System Model	5
1.3 Problem Formulation	7
1.4 Proposed Automatic Jamming Modulation Classification (AJMC)	8
1.4.1 Radio Environment Representation	8
1.4.2 Learning Stage	9
1.4.3 Testing Stage	11
1.4.4 Multi-level Abnormality Measurements and Generalized Errors	13
1.4.5 Extract Jammer and Learn the Corresponding Dynamic Model	15
1.4.6 On-line Automatic Jamming Modulation Classification (AJC)	16
1.5 Simulation Results and Discussion	17
1.5.1 Simulation Setup	17
1.5.2 Learning Reference Model and Jamming Models	18
1.5.3 Online Classification Process	21
1.6 Conclusion	25
Bibliography	26
2 Physical and MAC Layer Techniques for Secure Positioning in Navigation Satellite Systems	29
<i>Francesco Ardizzon, Laura Crosara, Nicola Laurenti, Stefano Tomasin</i>	
2.1 Introduction	29
2.2 Attacks and Threats Against GNSS	30
2.2.1 Jamming	31
2.2.2 Spoofing	31
2.3 Authentication Techniques	32
2.3.1 System Side Authentication Techniques	32
2.3.2 Receiver Side Anti-Spoofing Techniques	38
2.4 Challenges and Perspectives for Cross-Authentication Techniques	39
2.4.1 Timing Based Authentication Cross-Check	39
2.4.2 Ranging Based Authentication Cross-Check	40

2.4.3	Remarks on the Cross-Authentication Checks	41
2.5	Timing Assurance Techniques	42
2.5.1	Time Spoofing Attacks Against Timing Services	42
2.5.2	Time Spoofing Detection Solutions	43
2.6	Concluding Remarks	43
	Bibliography	44
3	Physical Layer Security and Authentication with Practical Transmissions	49
	<i>Linda Senigagliesi, Marco Baldi, Ennio Gambi, Franco Chiaraluce</i>	
3.1	Introduction	49
3.2	Confidentiality at the Physical Layer	50
3.2.1	physical layer security (PLS) Notions and Metrics	51
3.2.2	Application to Practical Transmissions	53
3.2.3	Dealing with Partial Secrecy	57
3.3	Authentication at the Physical Layer	61
3.3.1	System Model	62
3.3.2	Statistical Methods	63
3.3.3	Machine Learning-based Methods	64
3.3.4	Numerical Results	64
3.4	Application to Cooperative Communications	65
3.4.1	Cooperative PLS	66
3.4.2	Authentication with Cooperative Communications	69
3.5	Conclusion	70
	Bibliography	70
4	Sensing and Privacy in Future Telecommunication Networks: a Joint Perspective	77
	<i>Francesco Gringoli, Renato Lo Cigno, Marco Cominelli, Lorenzo Ghiro</i>	
4.1	Introduction	78
4.2	Scenarios, Applications, and Threats	80
4.3	Principles of Sensing	82
4.4	Principles of Obfuscation	83
4.5	Transmitter-Side Pre-Distortion	84
4.6	SDR based Proof of Concept	86
4.6.1	Resistance to AI-Localization	89
4.6.2	BASE: Multi-Devices Experiments	91
4.6.3	Communication Performance	93
4.6.4	MIMO: Localizing with MIMO Devices	95
4.6.5	OCTOPUS and FRANKENSTEIN: Impact of Devices and Antenna Position	95
4.7	Implementation in 802.11n (openwifi)	96
4.7.1	Resistance to AI-Localization (in openwifi)	98
4.7.2	Communication Performance (in openwifi)	100
4.8	RIS-based Protection	102
4.9	Conclusions and Perspectives	103
	Bibliography	104

II Part II **109**

5 Location Security in the Digital Era: Threats Detection, Analysis, and Mitigation Strategies	111
<i>Stefania Bartoletti, Ivan Palamà, Giuseppe Bianchi, Nicola Belfari Melazzi, Danilo Orlando</i>	
5.1 Introduction	111
5.2 Malicious Attacks in 4G/5G Networks	112
5.2.1 State-of-the-Art	113
5.3 Location Spoofing: Threat Models and Bounds	115
5.3.1 Formal Model	116
5.3.2 Error Model for the Spoofing Attack	117
5.3.3 Threat Model Example Case Study: Range-based Localization using RSSI	118
5.3.4 Error Bound under Spoofing Attack	118
5.3.5 Case Study	118
5.4 Spoofers and Jammer Detection Algorithms for Location Data	121
5.4.1 Sensor model and problem formulations	121
5.4.2 Noise-like Jammer Detectors	121
5.4.3 Spoofing Detection Architectures	123
5.4.4 Spoofing Detector: Uncorrelated Measurements	124
5.4.5 Spoofing Detector: Correlated Measurements	125
5.5 An Application: Location Security	125
5.5.1 Simulation Setting and Operating Scenarios	126
5.5.2 Performance of the BBNJ Detection Architectures	127
5.5.3 Performance of the Spoofing Detection Architectures	129
5.6 Conclusion	131
Bibliography	132
6 A Cybersecurity Framework for Securing Digital Service Chains	139
<i>G. Grieco, D. Striccoli, M. Repetto, A. Carrega, L. A. Grieco, R. Bolla, G. Piro, G. Boggia</i>	
6.1 Introduction	139
6.2 Related Work	141
6.3 The Reference Architecture	141
6.4 Security Operations	146
6.5 Module implementation	148
6.6 Performance Analysis	150
6.6.1 Elapsed Time for Service Authentication and Authorization	151
6.6.2 Latency Overhead in Message Reception	152
6.6.3 Resource Consumption	154
6.7 Conclusions	155
Bibliography	156
7 Internet of Things Security Issues in LoRaWAN and Bluetooth Low Energy	159
<i>Andrea Lacava, Pierluigi Locatelli, Pietro Spadaccino, Francesca Cuomo</i>	
7.1 Introduction	159
7.2 Low Power Technologies for Internet of things (IoT)	160
7.2.1 LoRaWAN in a Nutshell	160
7.2.2 Security in Bluetooth Low Energy (BLE) Mesh Networks	162

7.3	Privacy Issues in LoRaWAN	163
7.3.1	Privacy-Monitoring Methodologies for LoRaWAN	164
7.3.2	Features Modelling	166
7.3.3	Detection Procedure	167
7.3.4	Metrics for Network Operators	169
7.3.5	Countermeasures	170
7.3.6	Performance Evaluation	170
7.4	Hijacking Downlink Path Selection in LoRaWAN	172
7.4.1	Attack Identification	172
7.4.2	TWR Attack	173
7.4.3	Effects	174
7.4.4	Results	177
7.5	Identification of DoS Attacks in BLE	179
7.5.1	Intrusion Detection System (IDS) Architecture and Working	180
7.5.2	Data Collection	182
7.5.3	Results and Performance Evaluation	185
7.6	Conclusions	186
	Bibliography	187
8	Trustworthy Task Allocation in IoT: a Cognitive Game-Theoretical Use Case	191
<i>Virginia Pilloni, Marco Martalò, Luigi Atzori</i>		
8.1	Introduction	191
8.2	Related Work	192
8.3	System Model	193
8.4	Malicious Attacks: a Use Case	195
8.4.1	Spectrum Sensing in Malicious Cognitive IoT	196
8.4.2	Cluster Node Bidding	198
8.5	Simulation Results	199
8.6	Concluding Remarks	202
	Bibliography	202
III	Part III	207
9	Video Deepfake Detection by Identity Analysis	209
<i>Davide Cozzolino, Giovanni Poggi, Luisa Verdoliva</i>		
9.1	Introduction	209
9.2	Video-based Identity Approach	212
9.2.1	Feature Extraction	212
9.2.2	Temporal ID Network	213
9.2.3	3DMM Generative Network	214
9.2.4	Identification	215
9.3	Experimental Results	215
9.3.1	Experimental Setup	216
9.3.2	Ablation Study	216
9.3.3	Comparisons to State of the Art	217
9.3.4	Generalization and Robustness Analysis	218

9.3.5	Visualization of the Embedded Vectors	220
9.3.6	Robustness to Different Contexts	220
9.3.7	A Real Case on the Web	221
9.4	Conclusion	221
9.5	Acknowledgment	223
	Bibliography	223
10	Detecting Audio Deepfakes using Semantic Traces	227
	<i>Davide Salvi, Clara Borrelli, Sara Mandelli, Paolo Bestagini, Stefano Tubaro</i>	
10.1	Introduction	227
10.2	Synthetic Speech Detection Using Semantic Traces	228
10.2.1	Problem Formulation	229
10.2.2	Synthetic Speech Detection Through Emotion Recognition	229
10.2.3	Synthetic Speech Detection Through Automatic Speaker Verification and Prosody Features	231
10.3	Experimental Setup	233
10.3.1	Dataset Description	233
10.3.2	Considered Baseline	235
10.3.3	Emotion-based Detector Setup	235
10.3.4	Prosody-Speaker-based Detector Setup	236
10.4	Results	237
10.4.1	Emotion Detector Results	237
10.4.2	ProsoSpeaker Detector Results	238
10.4.3	Comparison between Emotion and Prosospeaker detectors	242
10.5	Conclusions	242
	Bibliography	243
11	A Hybrid Architecture for the Classification and Localization of GAN-generated Images with Improved Robustness and Generalization Capabilities	247
	<i>Jun Wang, Benedetta Tondi, Mauro Barni</i>	
11.1	Introduction	247
11.2	The Proposed Hybrid Architecture	248
11.3	Detection of GAN-generated Flood Images	250
11.3.1	Dataset Construction	250
11.3.2	Experimental Setting	252
11.4	Classification of GAN Face Editing	258
11.4.1	Portrait Face Manipulation Dataset	259
11.4.2	Experimental Setting	259
11.4.3	Results	263
11.5	Conclusion	264
	Bibliography	264
12	Container and Content-based Media Signatures for Open-World Multimedia Forensics	271
	<i>D. Baracchi, D. Shullani, A. Montibeller, M. Iuliani, C. Pasquini, G. Boato, A. Piva, F. De Natale</i>	
12.1	Introduction	271
12.2	Proposed Open-World Forensic Framework	273

12.2.1	Media Signature Encoder	275
12.3	Experimental Setup	276
12.3.1	Datasets	277
12.3.2	Features	280
12.3.3	Experiments	281
12.4	System Usability	284
12.4.1	System Scalability	285
12.5	Conclusions	288
	Bibliography	289
