Preface	xv
1 Fundamental Limits of MIMO-OFDM Sensing	1
<i>L. Arcangeloni, C. Giovannetti, L. Pucci, T. Bacchielli, N. Decarli, D. Dardari, A. Giorgetti</i>	
1.1 Introduction	1
1.2 Sensing with OFDM Waveforms: Signal Model	2
1.2.1 Transmitted Sensing Signal	3
1.2.2 Received Sensing Signal	3
1.2.3 Channel Model	4
1.3 Fundamental Limits in SIMO Monostatic Configurations	6
1.3.1 Far-field Conditions	7
1.3.2 Near-field Conditions	8
1.3.3 Position Error Bound	12
1.3.4 MIMO Configuration	13
1.4 Fundamental Limits in Cooperative Sensing	13
1.4.1 Cooperative Monostatic PEB	14
1.4.2 Cooperative Monostatic VEB	16
1.4.3 Multistatic Network	18
1.5 Concluding Remarks	20
2 Information-theoretic Aspects of ISAC	25
<i>G. Caire</i>	
2.1 Introduction	25
2.2 Monostatic ISAC without Feedback	26
2.2.1 Communication-only: Capacity of State-dependent Channels	28
2.2.2 Rate-distortion-cost Tradeoff	30
2.2.3 Blahut-Arimoto Algorithm to Evaluate the Tradeoff Curve	32
2.2.4 Log-loss and Sensing Mutual Information	35
2.2.5 The MIMO Block-fading Case	37
2.3 Monostatic ISAC with Implicit Feedback	43
2.4 Bistatic ISAC Model	46
2.5 Concluding Remarks	49
3 Towards Seamless Networked Integrated Sensing and Communication	53
<i>E. Matricardi, L. Pucci, E. Favarelli, E. Paolini, A. Giorgetti</i>	

3.1	Introduction	53
3.2	Networked ISAC Architectures	55
3.2.1	Monostatic Deployment	55
3.2.2	Bistatic Deployment	56
3.2.3	Multistatic Deployment	58
3.3	Cooperative Monostatic ISAC	58
3.3.1	Data Fusion and Target Detection	59
3.3.2	Multi-target Tracking and Track Management	60
3.3.3	Practical Considerations: Synchronization, Overhead, and Complexity	61
3.3.4	Resource Allocation Strategies	61
3.4	Cooperative Multistatic ISAC	64
3.4.1	Search Operation	65
3.4.2	Reliability Maps for Selective Data Fusion	66
3.4.3	Fusion of Range-Angle Maps and Clustering	67
3.5	AI for Target Sensing	70
3.5.1	Modeling Complex Targets: The Vehicle	70
3.5.2	Target Recognition	72
3.6	Concluding Remarks	74
4	Radio-Based Imaging in Next-Generation ISAC Systems	81
	<i>D. Tagliaferri, D. Tornielli Bellini, M. Manzoni, S. Tebaldini</i>	
4.1	Introduction	81
4.2	Radio Imaging Fundamentals	83
4.3	Signal Model and Processing Methods	88
4.3.1	Waveform Considerations and Tx Signal	89
4.3.2	Received Signal	90
4.3.3	CFR Reconstruction and Image Formation	92
4.4	Synchronization and Calibration	95
4.4.1	Synchronization	98
4.4.2	Calibration	100
4.5	Concluding Remarks	101
5	Distributed Intelligence for ISAC Across the Computing Continuum	105
	<i>S. Bartoletti, D. Shintaro Cometti, U. Ali, N. Blefari Melazzi</i>	
5.1	Introduction	105
5.2	Standardized Frameworks Enabling Distributed ISAC	106
5.2.1	From Core-Centric to Distributed ISAC Architectures	106
5.2.2	Collective Perception as a Native ISAC Service	107
5.2.3	Mobile Edge Computing for ISAC	109
5.3	Distributed Intelligence for ISAC	111
5.3.1	Distributed Signal Processing and Inference Frameworks	112
5.3.2	Distributed and Collaborative Learning	114
5.4	Case Study: Sensing-Aided Beam Management	116
5.4.1	Beam Management	117
5.4.2	Location and Sensing-aided Beam Prediction	118
5.4.3	Federated Beam Prediction	119

5.5	Concluding Remarks	121
6	Security and Privacy for ISAC	127
	<i>S. Bartoletti, F. Gringoli, S. Tomasin, A. Volpato, G. Focarelli, S. Zanini, I. Palamà, G. Bianchi</i>	
6.1	Introduction	127
6.2	Data Protection Considerations	128
6.2.1	General Considerations on Data Protection	128
6.2.2	Data Protection Considerations on ISAC Component	130
6.2.3	Data Protection Considerations on AI Component	131
6.3	Security and Privacy Models and Metrics	132
6.3.1	Model and Metrics for Location Privacy	132
6.3.2	Model and Metrics for Physical-layer Authentication	133
6.3.3	Models and Metrics for Integrity and Security	134
6.4	Jamming and Spoofing Against ISAC	135
6.5	Privacy Leakage Vectors	136
6.5.1	Identity Disclosure Risks	137
6.5.2	Device Identification through Radio Fingerprinting	140
6.5.3	Position and Behavior Inference from CSI	141
6.5.4	ISAC For Security	142
6.6	Countermeasures	143
6.6.1	User Anonymization	143
6.6.2	Cooperative ISAC under Spoofing Attacks	144
6.6.3	Self-consistency and Integrity Monitoring in ISAC	146
6.6.4	Semi-supervised Learning for Anomaly Detection	147
6.6.5	Privacy-by-Design: Obfuscating CSI	148
6.6.6	Privacy-by-Design: IMSI Concealment in 5G	150
6.7	Concluding Remarks	151
7	OFDM Radar Onboard Moving Platform for GMTI	155
	<i>A. Quirini, C. Bongioanni, F. Colone, P. Lombardo</i>	
7.1	Introduction	155
7.2	Signal Model and Reference Scenario	158
7.3	A Reciprocal Filter-Based DPCA Approach	161
7.4	Supervised Reciprocal Filter for Flexible Batching	165
7.5	The Supervised DPCA Reciprocal Filter Scheme	167
7.5.1	Theoretical Performance Analysis	168
7.5.2	Simulated Performance Analysis	170
7.6	Experimental Results	172
7.6.1	Case A: RF-Based Clutter Suppression in a Passive Radar Scenario	173
7.6.2	Case B: Supervised DPCA-RF and NULA in a Mobile ISAC Scenario	173
7.7	Concluding Remarks	176
8	MIMO-OFDM Transceiver for ISAC: Design and Performance Measures	181
	<i>E. Grossi, M. Lops, L. Venturino</i>	
8.1	Introduction	181

8.2	ISAC System Model	184
8.2.1	Communication Function	185
8.2.2	Radar Function	186
8.2.3	Transmit Beampattern	187
8.3	System Design	188
8.3.1	Proposed Suboptimal Solution	189
8.3.2	Examples of Radar Merit Functions	189
8.4	Numerical Examples	192
8.5	Concluding Remarks	196
9	V2X-ISAC: Merging Perception and Communication in Vehicular Networks	203
	<i>B. M. Masini, N. Decarli, C. Giovannetti, F. Guidi, A. Bazzi, S. Bartoletti, A. Zanella</i>	
9.1	Introduction	203
9.2	Scenarios and Applications	205
9.3	Localization and Sensing KPIs	208
9.4	V2X Sidelink Communication	210
9.4.1	Current Sidelink Communication	210
9.4.2	Enhanced Sidelink Communication	210
9.4.3	Communication Performance and Challenges	211
9.5	V2X Positioning	212
9.5.1	Standardization of Positioning Measurements and Methods	214
9.5.2	Architectural Elements	214
9.5.3	Positioning Performance and Challenges	215
9.6	V2X Sensing	218
9.6.1	Standardization of Sensing Measurements and Methods	219
9.6.2	Architectural Elements	220
9.6.3	Sensing Performance and Challenges	220
9.7	Future Perspectives	221
9.8	Concluding Remarks	223
