|                                                                                                                                 |            |
|---------------------------------------------------------------------------------------------------------------------------------|------------|
| <b>PREFACE AND EXECUTIVE SUMMARY .....</b>                                                                                      | <b>5</b>   |
| <br>                                                                                                                            |            |
| <b>1. Isophoric Sparse Arrays for Satellite Communications.....</b>                                                             | <b>9</b>   |
| by O.M. Bucci, T. Isernia, A. Morabito,<br>S. Perna and D. Pinchera                                                             |            |
| <b>2. Inverse problems in antenna radiation and diagnostics.....</b>                                                            | <b>31</b>  |
| by A.Brancaccio, G. Leone, M. Maisto,<br>R. Pierri, R. Solimene                                                                 |            |
| <b>3. Blending Electromagnetic and Information Theory in Antenna Synthesis:<br/>Theory, Applications and Perspectives .....</b> | <b>51</b>  |
| by Marco Donald Migliore                                                                                                        |            |
| <b>4. Large Sparse Array Synthesis for 5<sup>th</sup> Generation (5G)<br/>Communication Systems .....</b>                       | <b>67</b>  |
| by Mario Lucido, Marco Donald Migliore, Gaetano Panariello,<br>Daniele Pinchera, Fulvio Schettino                               |            |
| <b>5. Optimal Trade-Off Synthesis for Future Generation<br/>Phased Arrays @ ELEDIA Research Center .....</b>                    | <b>81</b>  |
| by N. Anselmi, A. Massa, G. Oliveri, L. Poli,<br>P. Rocca, M. Salucci, A. Poli                                                  |            |
| <b>6. Recent Advances in Leaky-Wave Antennas:<br/>From Far-field to Near-field Applications .....</b>                           | <b>99</b>  |
| by A. Galli, P. Baccarelli, P. Burghignoli D. Comite, W. Fuscaldo                                                               |            |
| <b>7. Metamaterials for Radiating Structures with Enhanced Functionalities .....</b>                                            | <b>123</b> |
| by M. Barbuto, F. Bilotti, A. Marini, A. Monti,<br>D. Ramaccia, A. Toscano, S. Vellucci                                         |            |
| <b>8. Metasurface Antennas .....</b>                                                                                            | <b>139</b> |
| by M.Faenzi, G. Minatti, David G. Ovejero, F. Caminita,<br>E. Martini, C. Della Giovampaola and S. Maci                         |            |

|                                                                                                           |            |
|-----------------------------------------------------------------------------------------------------------|------------|
| <b>9. Conformal Phased Array Diagnostic by Fast Matrix Method .....</b>                                   | <b>161</b> |
| by G. Di Massa, S. Costanzo                                                                               |            |
| <b>10. Phaseless Antenna Diagnostics via Compressive Sensing .....</b>                                    | <b>175</b> |
| by T. Isernia, A. F. Morabito, R. Palmeri                                                                 |            |
| <b>11. Recent developments in the Near-Field to Far-Field<br/>transformation techniques @ UNISA .....</b> | <b>183</b> |
| by F. D'Agostino, F. Ferrara, C. Gennarelli, R. Guerriero, M. Migliozzi                                   |            |
| <b>12. Computational-enhanced antenna and platform<br/>measurements /characterization.....</b>            | <b>199</b> |
| by L. Ciorba, M. Righero, G. Giordanengo, G. Vecchi                                                       |            |
