Table of Contents

Preface **vii**

I Part I **1**

1 Paradigms for Acquisition and Automatic Processing of Physiological Signals using Wearable Devices **3**
Giulia Da Poian, Roberto Rinaldo, Pamela Zontone
1.1 Introduction . . . 3
1.2 Sparse Representation and Compressive Sensing . . . 5
1.3 Energy savings with Compressive Sensing . . . 9
1.4 Processing in the Compressed Domain . . . 13
1.5 Machine Learning for Stress Recognition using ECG and SPR . . . 16
1.6 Concluding remarks . . . 20

2 Design and Deployment of Data-driven Solutions for Medical Image Analysis **27**
Alberto Signoroni, Mattia Savardi
2.1 Introduction . . . 27
2.2 Background . . . 28
2.3 General framework . . . 29
2.4 Data collection and curation . . . 31
2.5 Task categories and DL-based approaches . . . 35
2.6 Types of learning . . . 38
2.7 Explainability . . . 39
2.8 Experimental activity and validations . . . 40
2.9 Ethical and regulatory aspects . . . 41
2.10 Implementations . . . 42
2.11 Concluding remarks . . . 43

3 E-Health at the Edge: A Layered Approach based on Wearable Computing Systems **51**
Gianluca Aloi, Giancarlo Fortino, Raffaele Gravina, Pasquale Pace, Claudio Savaglio
3.1 Introduction . . . 51
3.2 Related works . . . 52
3.3 Edge-based architecture for wearable and mobile Healthcare . . . 54
3.3.1 BWE-MC architecture . . . 54
3.3.2 BWE-GTW architecture . . . 56
3.3.3 Flexibility and Interoperability . . . 58

3.4 Use Cases . . . 59
3.5 Simulation-driven approach . . . 60
3.5.1 EdgeCloudSim . . . 61
3.6 Use Cases analysis and simulation . . . 61
3.6.1 Common Simulation Settings . . . 61
3.6.2 Life-Style Monitoring Service . . . 63
3.6.3 HRV Monitoring service . . . 64
3.6.4 Simulation results analysis . . . 66
3.7 Concluding remarks . . . 67

II Part II **71**

4 From Brain-Machine Interfaces to Neurorobotics **73**
Gloria Beraldo, Stefano Tortora, Luca Tonin, Emanuele Menegatti
4.1 Introduction . . . 73
4.2 BMI as input interface . . . 74
4.3 Brain-actuated robots . . . 76
4.4 Hybrid BMI fusing multimodal signals . . . 78
4.5 ROS-Neuro: A middleware for neurorobotics . . . 81
4.6 Concluding remarks . . . 82

5 Cyber-physical Platform for Parkinson's Disease Stage Assessment based on the Neuro-Muscular Involvement during Gait **89**
Daniela De Venuto, Giovanni Mezzina
5.1 Introduction . . . 89
5.2 Related Works . . . 90
5.3 Brief Medical Background . . . 92
5.3.1 Cortico-Muscular Synergies . . . 92
5.3.2 Experimental Protocol . . . 92
5.4 The Cyber-Physical System . . . 93
5.4.1 The Wireless Body Area Network . . . 93
5.4.2 The CPS Working Principle . . . 94
5.5 The CPS hardware implementation . . . 97
5.6 Experimental Results . . . 100
5.6.1 CPS Accuracy Performance . . . 101
5.6.2 FPGA Resources Utilization . . . 102
5.7 Concluding remarks . . . 102

III Part III **107**

6 Patient Monitoring through eHealth Solutions: A Signal Processing Perspective **109**
Igor Bisio, Chiara Garibotto, Fabio Lavagetto, Andrea Sciarrone
6.1 The future of healthcare: IoT for eHealth . . . 109
6.2 Digital Signal Processing in next-generation patient monitoring systems . . . 110
6.3 Practical cases of study: *SmartPants* and *SmartGlass* . . . 113

6.3.1 *SmartPants*: home rehabilitation for post-stroke patients . . . 113
6.3.2 SmartGlass: early detection of neurological symptoms . . . 124
6.4 Concluding remarks . . . 135

7 DOMHO: A Smart Assisted-living Solution for Fragile People 143
Andrea Zanella, Federico Mason, Patrik Pluchino, Giulia Cisotto, Valeria Orso, Luciano Gamberini
7.1 Introduction . . . 143
7.2 Elderly and Fragile People: Needs and Requirements . . . 145
7.2.1 Motor impairments and the risk of falling . . . 145
7.2.2 Cognitive impairments . . . 145
7.2.3 Perceptual declines . . . 146
7.2.4 Social isolation . . . 146
7.3 A General Framework for IoT-based AAL systems . . . 146
7.3.1 Observe . . . 147
7.3.2 Contextualize . . . 147
7.3.3 Decide . . . 148
7.3.4 Act . . . 148
7.3.5 Technical and functional performance aspects . . . 149
7.4 A User-Centric IoT Design Framework . . . 149
7.4.1 Co-Design . . . 150
7.4.2 Multi-Modality . . . 151
7.4.3 Customization . . . 151
7.4.4 Data privacy and security . . . 152
7.4.5 Technology trustworthiness . . . 152
7.4.6 Modularity . . . 153
7.5 The DOMHO System . . . 153
7.5.1 Co-design . . . 154
7.5.2 Preliminary assessments . . . 154
7.5.3 System customization . . . 155
7.5.4 Safety and privacy protection . . . 155
7.5.5 Modularity . . . 156
7.6 Conclusions . . . 156

8 Respiration Monitoring by Video Signal Processing 163
Veronica Mattioli, Davide Alinovi, Francesco Pisani, Gianluigi Ferrari, Riccardo Raheli
8.1 Introduction . . . 163
8.1.1 Respiratory Disorders . . . 164
8.2 Respiration Monitoring . . . 165
8.2.1 Contact-based Techniques . . . 165
8.2.2 Contact-less Techniques . . . 166
8.3 Video Processing Systems for Respiration Monitoring . . . 168
8.3.1 Motion Information Extraction . . . 168
8.3.2 Motion Magnification . . . 169
8.3.3 Respiratory Rate Estimation . . . 170
8.3.4 Pixel-wise Maximum Likelihood Estimation . . . 171
8.4 Modeling and Simulation of Breathing Patterns . . . 172
8.4.1 Model of breathing patterns . . . 172

8.4.2 Simulators 174
8.5 Application and Results 175
8.5.1 Performance Analysis 177
8.6 Conclusions 178

9 Monitoring Health and Behavior in an Ecological Environment with Digital Technologies 183

Serena Moscato, Pierpaolo Palumbo, Luca Palmerini, Sabato Mellone, Elena Borelli, Mattia Corzani, Lorenzo Chiari

9.1 Introduction 183
9.2 Areas of interest 184
9.2.1 Remote patient monitoring 184
9.2.2 Prevention 191
9.2.3 Assistance and rehabilitation 195
9.3 Concluding remarks 201
