Table of Contents

Preface viii

I Part I **1**

1 Nonlinear response of Si Photonics resonators for reservoir computing neural network **3**

E. Staffoli, D. Bazzanella, S. Biasi, G. Donati, M. Mancinelli, P. Bettotti, L. Pavesi

1.1 Introduction 3
1.2 A simple photonic network: the delayed complex perceptron 6
1.3 Nonlinear dynamics in a microring resonator 9
1.4 Silicon microring resonator for reservoir computing 12
1.5 Linear and Nonlinear tasks on a Microring resonator 17
1.6 Microring resonators with external optical feedback for time delay reservoir computing 23
1.7 Conclusions 28

2 Photonics of metasurfaces **35**

D. Rocco, A. Locatelli, P. Francheschini, L. Carletti, M. Gandolfi, A. Tognazzi, O. Sergaeva, C. De Angelis

2.1 Introduction 35
2.2 Linear Metasurfaces 36
2.3 Nonlinear metasurfaces 37
2.3.1 Nonlinear Metalens 37
2.3.2 Nonlinear imaging 39
2.4 Conclusions 43

3 Materials and configurations for efficient nonlinear conversion in photonic circuits **51**

C. Lacava, V. Vitali, I. Cristiani

3.1 Introduction 51
3.2 Nonlinear integrated platforms 52
3.2.1 Silicon on insulator and silicon nitride on insulator platforms . . . 52
3.2.2 Nonlinear platforms enabling second-order nonlinear effects 53
3.2.3 Nonlinear platforms based on III-V materials on insulator 55
3.2.4 Mid-IR integrated platforms 56
3.3 Multimode nonlinear integrated photonics 57
3.4 Conclusion 60

4 Graphene photonics for optical and wireless communications 67
V. Sorianello, A. Montanaro, M. Romagnoli
4.1 Introduction . . . 67
4.2 Graphene optoelectronic properties . . . 69
4.3 Graphene photonics modulators . . . 71
4.3.1 Single layer graphene modulators . . . 75
4.3.2 Double layer graphene modulators . . . 77
4.4 Graphene photonics photodetectors . . . 79
4.4.1 Graphene photo-thermoelectric detectors . . . 80
4.4.2 Graphene Photo-bolometric detectors . . . 82
4.5 Graphene electronic mixers for wireless communication . . . 85

II Part II 95

5 Modeling and mitigation of nonlinear effects in optical fiber systems 97
A. Bononi, P. Poggiolini, M. Secondini, P. Serena
5.1 Introduction: Historical perspective . . . 97
5.2 Nonlinear Schroedinger Equation . . . 99
5.3 Numerical methods for the NLSE . . . 102
5.4 Perturbation methods . . . 104
5.5 Time domain perturbative model . . . 105
5.6 The GN model . . . 107
5.6.1 The impact of the modulation format . . . 108
5.6.2 The incoherent GN model . . . 108
5.6.3 Closed-form approximate solutions of the GN/EGN model . . . 110
5.6.4 System and Networking Results from the GN/EGN model . . . 113
5.6.5 System Results . . . 113
5.6.6 Networking Results . . . 114
5.6.7 Extensions of the GN model . . . 115
5.6.8 GN model in submarine links . . . 117
5.6.9 COP amplifiers and the Generalized Droop Model . . . 117
5.6.10 Real constant-pump EDFAs . . . 120
5.7 Nonlinearity mitigation . . . 120
5.7.1 Digital backpropagation . . . 121
5.7.2 Constellation shaping . . . 122
5.7.3 Nonlinear frequency division multiplexing . . . 125
5.8 Capacity bounds of the optical fiber . . . 126

6 Space-division multiplexing in multi-core and multi-mode fibers 141
C. Antonelli, P. Serena, L. Palmieri, A. Carena, P. Boffi, N. Sambo
6.1 Introduction . . . 141
6.2 Propagation effects in SDM fibers . . . 143
6.2.1 Modal dispersion and system complexity . . . 144
6.2.2 Nonlinear propagation: Generalization of the Manakov equation . . . 146
6.3 The Ergodic Gaussian Model of nonlinear propagation in SDM fibers . . . 147
6.4 Coupling mechanisms in SDM fibers . . . 150

6.4.1 Mode coupling for specific perturbations . . . 152
6.5 Transmission experiments in multi-core fibers . . . 153
6.6 Space-division multiplexing in multi-mode fibers . . . 157
6.6.1 Mode group routing . . . 158
6.6.2 MIMO-free mode group division multiplexing . . . 161

7 Hollow-core fibers for optical fiber communications 169
G. Bosco, L. Palmieri, P. Poggiolini, L. Vincetti
7.1 Introduction . . . 169
7.2 Description and properties of hollow-core fibers . . . 169
7.2.1 Introduction . . . 169
7.2.2 Waveguiding mechanism . . . 170
7.3 Coupled mode theory for hollow-core fibers . . . 175
7.3.1 Transformation optics . . . 176
7.3.2 The unified coupled mode theory . . . 177
7.3.3 Example of application . . . 179
7.4 Application of hollow-core fibers in long-haul transmission systems . . . 181
7.4.1 The Advent of NANF . . . 181
7.4.2 Ultra-Long-Haul Transmission experiments over NANF . . . 182
7.4.3 Potential performance of long-haul transmission over NANF . . . 186
7.5 Conclusions . . . 189

8 Prospects of optical wireless solutions for data center networks 195
E. Ciaramella, G. Cossu, M. Biagi
8.1 Introduction . . . 195
8.2 Architecture of optical wireless data centers . . . 197
8.3 OWC Systems . . . 200
8.3.1 Insights about MIMO and OWC for data-centers . . . 203
8.4 Conclusion . . . 204

III Part III 209

9 Overview on the Recent Evolution in High-Speed Optical Access Networks 211
A. Pagano, P. Parolari, R. Giuliano, F. Mazzenga, R. Gaudino
9.1 Introduction . . . 211
9.2 Wide Area Telecommunication network: evolution of physical deployment and management . . . 212
9.2.1 Innovative wide area network architectures . . . 213
9.2.2 On the importance of taking IP to the network edge . . . 216
9.3 Introduction on the current state of the art in Passive Optical Networks . . . 218
9.3.1 Architecture and fiber infrastructure . . . 219
9.3.2 System description . . . 220
9.3.3 Management and quality of service . . . 221
9.4 Research trends towards 100G-PON . . . 223
9.4.1 Quick introduction to PON high speed standards . . . 224

9.4.2 100Gbps/λ: IM-DD or Coherent? . . . 225
9.4.3 Towards 200Gbps/λ and more? . . . 226
9.5 Research in flexible PON solutions . . . 227
9.5.1 Motivations supporting rate adaptation in PONs . . . 227
9.5.2 Flexible rate PONs . . . 229
9.6 Conclusions . . . 231

10 Optical Access for 5G and B5G **237**
L. Valcarenghi, A. Marotta, C. Centofanti, F. Graziosi, J. C. Borromeo
10.1 Introduction . . . 237
10.2 5G Network Function Acceleration . . . 239
10.2.1 System Model . . . 239
10.2.2 Implementation . . . 240
10.2.3 Illustrative Experimental Results . . . 241
10.3 Collaborative Approach for Saving Fronthaul Energy in 5G TDD Networks 243
10.3.1 System Model . . . 243
10.3.2 Cooperative Sleep Technique . . . 245
10.3.3 Results . . . 246
10.4 Conclusion . . . 248

11 Novel architectures for metro and transport optical networks **251**
V. Curri, A. Giorgetti, M. Ibrahimi, F. Paolucci, N. Sambo
11.1 Network architecture and upgrades . . . 251
11.1.1 Multi-band optical networking . . . 251
11.1.2 Filterless Optical Networks (FON) . . . 257
11.2 Digital twin of the multi-band optical transport . . . 264
11.2.1 Optical Transport AWGN Model . . . 264
11.2.2 Dual-polarization Coherent Transceivers . . . 266
11.2.3 Optical Amplifiers . . . 267
11.2.4 Fiber Propagation . . . 268
11.2.5 Re-configurable Optical Add/Drop Multiplexers . . . 270
11.2.6 GNPy as an optical network digital twin . . . 271
11.3 SDN control, disaggregation, and telemetry . . . 273
11.3.1 SDN control of disaggregated optical networks . . . 273
11.3.2 Telemetry . . . 282

12 Machine Learning for future optical network automation **301**
C. Rottondi, F. Musumeci, R. Proietti, S. Troia, A. D'Amico
12.1 Introduction . . . 301
12.2 Application of ML based on signal quality metrics . . . 301
12.2.1 QoT estimation . . . 302
12.2.2 Optical network failure management . . . 305
12.2.3 ML for optical amplifier modeling and control . . . 308
12.3 Application of ML based on network data . . . 310
12.3.1 Machine-Learning based Routing and Wavelength Assignment for optical networks . . . 311
12.3.2 Applications in Datacenter networks . . . 316

12.3.3 Conclusions 321
