1	Introduction	1
1.1	Overview and Motivation	2
1.2	Aims and Goals	8
1.3	Layout of the Thesis	8
1.4	Scientific Contributions Achieved by this Work	9
I	Background and Theoretical Investigations	11
2	Background	13
2.1	Basic Radar Processing	13
2.2	Introduction to Radar Waveforms	20
3	Moving Platform Issues in Noise Radar Technology	37
3.1	The Doppler Tolerance in Continuous Emission Noise Radar	38
3.2	Common Doppler Compensation Techniques	59
3.3	Range-Doppler Migration in Noise Radar	66
3.4	Clutter Suppression in Noise Radar on Moving Platforms	68
3.5	Chapter Summary	73
4	Advanced Range-Doppler Processing	75
4.1	Introduction	75
4.2	Prerequisites of the Range Filter Bank	76
4.3	The Range Filter Bank (RFB) Algorithm	98
4.4	Chapter Summary	112

II Experimental Investigations	115
5 The Noise Radar Demonstrator	117
5.1 General Functionality of CE Noise Radars	117
5.2 High Level Description of the Noise Radar Demonstrator	120
5.3 The Demonstrator Development Procedure	125
5.4 Digital Back End	128
5.5 Analog Front End	159
5.6 Chapter Summary	174
6 Static Tests for Noise Radar Verification	177
6.1 System-Level Laboratory Experiment	178
6.2 Stationary Field Tests	181
6.3 Chapter Summary	198
7 Moving Target Detection Experiments	199
7.1 Demonstrator Setup for MTD Experiments	200
7.2 Experimental Range Filter Bank Verification	202
7.3 General Applicability of the RFB on ISAR Imaging	209
7.4 Interference Rejection Experiment	211
7.5 Chapter Summary	214
8 Noise Radar Experiments on a Moving Platform	215
8.1 Aim of the Experiments	215
8.2 Demonstrator Setup and Antenna Configuration	216
8.3 Experiments in Static Scene	224
8.4 Dynamic Scene Measured from a Moving Platform	238
8.5 Non-Cooperative Measurements at Larger Distance	245
8.6 Conclusions and Outlook	252
III Discussion	253
9 Discussion	255
9.1 Comparison between RFB and cross-ambiguity function	255
9.2 Real-Time Implementation Strategy for the RFB	265
10 Conclusions	269
10.1 Summary	269

10.2 Potential Applications	270
10.3 Outlook and Future Work	271
Appendix	275
A Doppler Tolerance of Gaussian Windowed Noise Segments	275
B Further Information on the Demonstrator System	279
B.1 Nyquist Band Sampling	279
B.2 Data Representations in the Demonstrator	285
C Detailed Cost Comparison	287
C.1 Formal Superiority of RFB against direct computation of the CAF	287
C.2 Formal Superiority of RFB against CAF Variant A	288
C.3 Formal Superiority of RFB against CAF Variant B	289
C.4 Formal Superiority of RFB against CAF Variant B, both factorized	289
